

Huawhenua Orchard Twyford

For some years I have been using the JH Biotech products supplied in New Zealand through Roots Shoots & Fruits Ltd in our export orientated apple orchard.

To date I have used many of the Biomin elements, **including Biomin Calcium, the individual trace elements products and Biomin Magnesium.**

Currently I am finding very good results using the **Biomin Magnesium.**

I have had excellent results in achieving improved leaf size and functionality as well as to colour and size my fruit over the last few years.

This year I achieved an average 103 count fruit on 30 Year old Royal Gala at 4200 gross boxes per hectare and my tree health has been fantastic.

Other products that I have used over the years and still currently use are Phoscare for natural phytoalexins, Mobilizer, MicroGyp (soluble gypsum) and I am keen to look at the BioSize Plus product to even up fruit size to the top end especially in the Jazz variety which is prone to uneven fruit size.

I would promote anyone to have a look at these products and discuss their abilities with Roots, Shoots & Fruits staff to see how they may fit your farming enterprise.

Sincerely

Richard Griffiths
